CHI Haiti

Our team is very strong in our software development abilities, and as such see the CHI Haiti project as an opportunity to apply our skills to a project that has the potential to have a positive impact on real communities in the next year. Deployment of a software project on a scale like this is valuable to our growth as software focused engineers and is a factor we impress great importance to.

Active Learning SaSS PWA for Medical Imaging Projects and Datasets

This would be an independent project, possibly sponsored by professor Johnson, in which we developed a SASS application for the easy processing annotation and collaboration on medical imaging projects/dataset. This project aligns well with our groups' interests in cloud technologies, progressive web application development, medical imaging, and machine learning.
